

First of all, I am very grateful to have been to this great Institute.

Here I had the opportunity to improve my knowledge about the Linux operating system. In my college in Brazil I had few lectures on this system, and now I am able to put that knowledge into practice and acquire new ones.

But what I really learned here is about NS-3 software. This software is an excellent tool to simulate the networks. Through it I am simulating wired and wireless networks such as Wi-Fi, WiMax, MANET and so on. I can analyze different protocols, Quality of Service, and network performance in different circumstances.

From the first moment that I arrived to Serbia, I could see that the Serbian people look a bit like the Brazilian people. They are very open and friendly, and this is very good for me.

At the Institute Mihailo Pupin I have created new friendships, especially with my mentors, Valentina and Slavica, who were very patient with me and helped me a lot. I have the doors open to receive them at my home in Brazil.

In January I will return to Brazil with the certainty that one day I will return to Serbia, preferably in the summer.

Thank you for everything Institute Mihailo Pupin, until sometime!
