

My name is Ahmed, I am from Oman. I study Electronic Instrumentation and Control at Sultan Qaboos University. It is my final year to get Bachelor degree.

Summer 2017 was the best summer I ever had. I met students from all over the world and I learned more about their life. After being together for about two months, we were like a big family.

It was a great opportunity for me to work at the Telecommunication department, Institute Mihajlo Pupin. The people here were very kind with me like I was with a member of my family! I would like to thank Valentina Timcenko, Veljko Janic and Natalija Lukic for treating me as I was their best friend.

My internship was about designing printed circuit boards (PCB) using Altium Designer. It was exactly what I want to learn. I learned how I can add different components to the library, design 3D model and many more.

I love being here in Serbia and I will miss it. I was amazed when I saw the people of Belgrade. They were nice and polite to every one. I had a great memories that I will never forgot them. I am sure that I will come back to Belgrade a gain.

At the end, I want to say thank you to everyone in Institute Mihajlo Pupin about what they gave to me.
